Secure Coding Tips

Tip: Old Versions of Fortify Software May Leave Vulnerabilities Undetected

This week's Secure Coding Tip is about using old versions of Fortify software (as opposed to rulepacks) during scans when using the HP Fortify Static Code Analyzer (SCA) software. Scanning source code to perform code review is an authorization requirement included in the Technical / Testing Requirements of the OCS Accreditation Requirements Guide / SOP [1], and enforced as part of the ATO issuance process.[2]

One of the top 10 issues[3] encountered by VA application developers using the HP Fortify SCA software is using old versions of the software to perform a scan.[4] Scans that do not use the most recent version of Fortify may not include a complete set of results; for example build environment support may be more complete in newer versions. Other scan issues may also result.

There are several steps you can take to resolve the issue. [Read more...](#)
