

VA Software Assurance Secure Coding Tip

Self-Paced VA Fortify End User Training Materials Are Available

This week's Secure Coding Tip is a reminder the VA software development community about the availability of self-paced VA Fortify End User Training materials. In order to request access to these training materials, please follow the instructions [here](#).

This training is provided by the VA Software Assurance Program Office and focuses on how to use the HPE Fortify Static Code Analyzer (SCA) tool. The tool supports C/C++, .NET languages, Java, Objective-C, and other programming languages, with the exception of MUMPS and Delphi.

Scanning source code to perform code review is an authorization requirement included in the VA Office of Cyber Security (OCS) Accreditation Requirements Guide / Standard Operating Procedures (SOP) [1], and enforced as part of the ATO issuance process.[2]
