

# New Technical Note For Fortify Tool-Provided Guidance On "Weak XML Schema: Unbounded Occurrences" Findings

The purpose of this announcement is to share with the VA developer and contractor community that a new Technical Notes section [Clarifications For Guidance Provided By Fortify](#) has been added to the VA Software Assurance Developer Support Site.

These technical notes will cover clarifications to the Fortify tool's guidance for common findings observed in VA application source code and potential mitigation strategies, subject to verification during the A&A process and continuous monitoring as per [VA Secure Code Review SOP](#).

A first of these notes [How to mitigate "Weak XML Schema: Unbounded Occurrences" findings](#) can be found in this new section.
