

# Self-Paced VA Secure Coding Training Materials Are Now Available

The purpose of this announcement is to share with the VA software development community the availability of self-paced VA Secure Coding Training materials. In order to request access to these training materials, please follow the instructions [here](#). This training is provided by the VA Software Assurance Program Office and uses the HPE Fortify Static Code Analyzer (SCA) tool to teach secure coding.

HPE Fortify SCA supports C/C++, .NET languages, Java, Objective-C, and other programming languages, with the exception of MUMPS and Delphi. Scanning source code to perform code review is an authorization requirement included in the VA Office of Cyber Security (OCS) Accreditation Requirements Guide / Standard Operating Procedures (SOP), and enforced as part of the ATO issuance process.
